NOTES

- Material/Finish:
 - Shell, Jam Nut - See Table I
 - Contacts - Copper Alloy / See Table III
 - Insulators - High Grade Rigid Dielectric.
 - Seals - Fluorosilicone Blend.
 - Potting - Epoxy.
- Glenair's 234-206 receptacle connector is designed to meet the applicable performance and interface requirements of MIL-DTL-38999 Series IV except as shown and/or noted. Receptacle mates with any QPL manufacturer's MIL-DTL-38999, Series IV plug having complimentary features (shell size, insert arrangement, polarization, and contact gender).
- Glenair's 234-206 connectors are designed to withstand a minimum of 1500 mating durability cycles when mated to a "super nine" mating connector and appropriate contacts applicable to all signal contact layouts only. High speed contacts are not intended for extended durability. Finish should be the same for both mating connectors to optimize performance..
- Insert arrangement is in accordance with MIL-STD-1560. Arrangement shown for reference only.
- Connector is supplied with contacts (including spares), insertion/removal tool, and sealing plugs where indicated in Table III.

- Alternate polarization 'U' (universal) is a non-standard MIL-SPEC option which allows for mating to any QPL manufacturer's MIL-DTL-38999, Series III connector having the same shell size, insert arrangement, and mating contact size. Universal connectors are intended for use in testing facilities only and should be highly evaluated before consideration in another environment.
- All contacts are shorted to each other and to the shell. The maximum resistance as measured from any contact to the shell shall be 10 miliohms.
- Connector temperature range: -55°C to 175°C. Contact manufacturer for additional options.

ENVIRONMENTAL CONNECTORS

QPL AND COTS EQUIVALENT **MIL-DTL-38999** **Series IV Hermetic**

The industry standard mil/aero connector backed with Glenair service and availability

Hermetic-class DLA certified MIL-DTL-38999 Series IV connectors from Glenair provide hermetically sealed breech lock connectors for high shock and vibration applications. Breech-lock systems provide robust engagement augmented by an internal mechanical thread to ensure connectors remain mated. Glenair Series IV hermetics maintain seal integrity and prevent ingress of chemical substances or fluids in mission-critical vacuum environments where air or gas impurities can result in corrosion, dielectric breakdown, and loss of insulation resistance between conductors. Typical applications include medical, geophysical, military aerospace and other industrial applications. Marked with D38999 or Glenair COTS part numbering, these hermetic class receptacles are available for panel mount, jam-nut, solder mount and weld mount shell styles. All standard material and finish classes are supported including Y (CRES, passivated) and N (CRES, electrodeposited nickel). Contact arrangements per MIL-STD-1560 and both normal and alternate polarizations are fully supported. Best of all, defense and commercial aerospace customers, as well as land and marine engineers and procurement specialists may now specify these mission-critical interconnects directly from Glenair—the recognized service, support, and availability leader for the interconnect industry.

DLA-QPL MIL-DTL-38999 SERIES III AVAILABLE FROM GLENAIR

- Qualified hermetic jam-nut, weld, solder and panel mount receptacles
- All 1560 crimp-contact insert arrangements fully supported
- N and Y plating classes, plus Glenair COTS equivalents
- 100% made in America, no foreign-sourced materials, component parts, or assembly labor employed

Glenair Mil-Spec Interconnect Technologies

Qualified Products: Glenair is a Mil-Aero connector supplier. Our product quality begins in engineering (the largest team in the high-performance interconnect business) and is realized in our “made in the USA” vertically-integrated manufacturing cells. One of the key ways we ensure both areas are functioning smoothly is to submit designs and manufactured specimens into the military QPL process administered by NAVSEA and the Defense Logistic Agency of the US government. These certification exercises are multi-year activities that test every aspect of an interconnect component’s performance.
